Master the management of your electronic resources

SwetsWise eSource Manager is the most comprehensive electronic license and resource management solution currently available. Swets understands that finding the time and effort to oversee and maintain a collection of publisher licenses, their status, the resources they cover and what you are allowed to do with those resources, is a time consuming, labor-intensive process. This is made more difficult with some publishers changing their licensing conditions annually and titles moving from one provider to another. We can help.

SwetsWise eSource Manager has been designed to meet the complex licensing and subscriptions management needs you may have in the most efficient, easy-to-use and effective way possible. SwetsWise eSource Manager delivers a pre-populated database of standard publisher license conditions - the largest collection in the industry - that can be easily searched, viewed and customized to reflect your specific publisher license agreements.

Electronic Resource Management made easy

SwetsWise eSource Manager enables you to more effectively manage and track your licenses, along with your subscriptions information, e-resource access and activation details—all from one interface. This is made possible thanks to the full integration with both Library and Corporate Editions of SwetsWise, providing you with the ability to:

- Automatically view detailed information on licenses you have signed, or are in the process of signing
- Upload electronic copies of actual signed licenses
- Automatically track title moves and other changes affecting titles under a specific license
- Attach subscriptions to specific licenses for both Swets and non-Swets managed titles
- Add additional licenses for subscriptions not managed through Swets

Benefits of SwetsWise eSource Manager

- Pre-populated database, automatically maintained for your convenience
- Contains the largest collection of publisher license information in the industry
- Covering the 45 most important data fields – as defined by the DLF ERMI project
- Automatic updating of Publisher changes
- Automatic association of your subscriptions with your licenses
- Extensive reporting options to provide you with a complete overview of the status of your resources
- Export all your license details in the Onix For Licensing Terms format

Detailed, customizable information

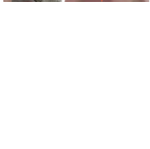

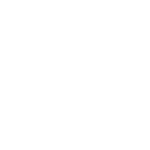

- Change any of the standard license conditions to match the agreements you have with publishers
- Insert your own fields to every license, allowing you to meet your information needs and giving you complete flexibility
- Have your internal workflow procedures reflected and tracked in SwetsWise
- Add all your licenses by taking advantage of the information available on standard publisher conditions or type in all details from scratch

Combine SwetsWise features to create the ultimate ERM solution

- Manage all your subscriptions and electronic resources from one interface
- No duplication of data - automatic inclusion of cost, subscription and status information for subscriptions handled via SwetsWise (Library or Corporate Edition)
- Automatic inclusion of additional resources when you purchase a new publication
